
(a) equal budget, different schedules
final error E_4
final residual indicator $\mathfrak{C}_4$
$\sum_{k<4} \|\rho_k\|$
10^{-1}
10^{-2}
uniform
late
early
(b) what predicts the final error
uniform: vs $\mathfrak{C}_4$
uniform: vs $\sum\|\rho_k\|$
late: vs $\mathfrak{C}_4$
late: vs $\sum\|\rho_k\|$
early: vs $\mathfrak{C}_4$
early: vs $\sum\|\rho_k\|$
final error E_4
indicator value
10^{-1}
10^{-2}
